

## HerdMASTER 4 Tip Sheet

### WHEN VIEWING A DTC MATING REPORT THERE ARE A LOT OF INCORRECT ANIMALS LISTED

#### WHY DOES THIS HAPPEN?

The reason this is happening is usually one of your animals within the period you are reporting on does not have a society ID or multiple animals have the same society ID.

When the visual report is created it inserts information based on the animal Society IDs you have recorded a mating for. So if you include an animal with no society ID it will match to EVERY other animal without a society ID and try to put them into the report. This information is not sent to BREEDPLAN, it is used JUST for the report.

#### HOW TO FIX

Make sure every animal you wish to report on is in the correct owner/breeder and has a society ID.
