

HerdMASTER 4 Tip Sheet

THE BULK CHANGE PERFORMANCE GROUPS UTILITY

In some situations it is necessary to change the details of many animals at once, for instance, the Performance Group value. HerdMASTER incorporates a utility that allows you to do this.

1. Click on the Utilities menu tab and roll your mouse over Bulk Change, then click Performance Group from the pop-up menu.

2. From the below form select the animals you want to change the performance groups for and hit the right arrow button to include them.

3. Select a start date and an end date, this will update any performance group assignments performed during this period.

4. In the bottom section you select the new performance group and whether to update the performance groups for matings, traits and weights.

5. When you have set everything up the way you want to hit the process button.
